SPRING—1941—SUMMER

GLEN SAINT MARY
NURSERIES COMPANY

59 Years in Business

GLEN SAINT MARY, FLORIDA

Our Message to You

Here is the Price List we have been promising for so long; we regret that it cannot be more complete.

Our plan is to issue the regular illustrated Nursery Book early next Fall and we assure you that your continued patronage so far this season, in spite of our lack of catalogues, has made us properly grateful for so many good friends.

We shall welcome opportunities of serving; please ask for any information desired about any plant or tree listed herein—and remember that the Spring and Summer months need not be a STOP sign for planting. Balled & Burlapped (B&B) plants are an easy answer to that problem and our well known guarantee still protects you against unusual losses.

TERMS OF BUSINESS

LOCATION. General Office and Nurseries at Glen Saint Mary, Baker County, Florida, on Seaboard Air Line Railway, and State Road No. 1, 30 miles west of Jacksonville. Office and Citrus Nurseries at Winter Haven, Polk County, Florida. Visitors are always welcome.

APPLYING PRICES. Orders for five (5), fifty (50), and five hundred (500) plants of one variety command the 10, 100, and 1000 rates respectively.

CASH or satisfactory reference must accompany all orders for immediate shipment unless the party ordering has an account. On orders booked in advance of the shipping season, 25 per cent down, with the balance due when the shipping season opens, will be required.

BE SURE to state clearly when ordering how you wish shipment made—Parcel Post, Express, or Freight. Lacking this information, we will use our best judgment as to method of forwarding. On orders for shipment by Parcel Post, add 25 per cent to the list price to cover cost of packing and postage. Please use our order blanks; additional ones will be mailed on request.

SHIPPING AND PLANTING SEASON. From the middle of November through March for bare-rooted plants. Planting season for B&B ornamentals is limited only by amount of watering and other care customer is prepared to give.

SUBSTITUTION. It is our desire to furnish stock exactly as ordered. On orders for commercial planting, substitution of varieties will not be made without permission from customer. On small orders, items which we are unable to supply will be omitted unless we are instructed to substitute.

WE GUARANTEE all stock sent out to be well rooted, well grown, true to name, properly packed, and shipped according to instructions. Our liability under the foregoing guarantee is limited in amount to the original price received. There shall be no nursery stock sold under a guarantee to live, except with the understanding that it will be replaced within 6 months from date of sale if it dies, at not less than 50 per cent of the purchase price, which shall be considered as insurance.

CLAIMS. If, by any possibility, errors should occur, they will be promptly rectified, if claim is made within 10 days after the receipt of goods. Our responsibility ceases upon delivery of nursery stock in good condition to public carrier.

AZALEAS

We head our list with **AZALEA GEORGE LINDLEY TABER**, a sport of Omurasaki originating here, and named for our founder, the late George Lindley Taber.

Its predominant color is soft lavender-pink, faintly streaked with darker pink and more distinctly mottled cerise toward the throat . . . slightly fragrant, the flowers are nearly as large as those of popular Formosa.

A rapid grower, the Taber is valuable as a substitute for, or in combination with, the lavenders such as Formosa and Phoenicea where a harmonious color-break is desired. It usually blooms here in March. We have found it extremely resistant to cold.

NATIVE AZALEAS

AZALEA AUSTRINA (Florida Flame Azalea). This beautiful Azalea, native in northwestern Florida, blooms in March and April. The spicy-scented flowers vary in color from light yellow through orange to orange-red. Plants grow to a height of 8 to 10 feet.

AZALEA CANESCENS (Native Azalea; Wild Honeysuckle). The most common of the native Azaleas and is found throughout northern Florida and southern Georgia, growing on moist, but well-drained acid soil. The trumpet-shaped flowers are usually pink in color, but white-flowered and deep pink specimens are sometimes found. They grow to large size, but are readily kept at any desired size by pruning. The blooming season is in February and March.

CAMELLIA JAPONICA

Group No. 1

BONOMIANA—White flowers with red variegations; the petals are loose with stamens interspersed. 8-12 in., 18-24 in. and 2-3 ft.

CHANDLERI ELEGANS—Flowers are double, very large, and of a cherry-red to rose pink color, splotched with white. The center petals are interspersed with yellow stamens. 8-12 in. and 12-18 in. only.

FANNY BASIL—Double variegated, white marked with rose. Leaves thick and good deep green. 12-18 in. and 18-24 in. only.

GLOIRE DE NANTES—Large, semi-double, very deep rose, long yellow stamens. 12-18 in. and 2-3 ft. only.

HERME—Very large, peony form. White, with red and pink stripes and splotches. 12-18 in.

HORKEN—Semi-double flowers; white with pink or rose markings. 18-24 in. and 2-3 ft.

KELLINGTONIA—Large, peony-type flowers of rich pink, shading lighter in the center. 2-3 ft. and 3-4 ft.

MARIANNA GAETE—Imbricated flowers of rich pink, shading lighter in the center. 12-18 in. and 2-3 ft.

MATHOTIANA ALBA—Usually white but sometimes striped with pink. Large double flowers. 8-24 in. only.

PINK PERFECTION—Flowers are medium size, shell pink. Free flowering. 8-12 in., 12-18 in., 18-24 in. and 2-3 ft.

PROFESSOR SARGENT—Very double peony form, varying from clear crimson to light red. One of the hardiest varieties. 8-12 in., 12-18 in., 2-3 ft. and 3-4 ft.

SEMI-DOUBLE BLUSH—Semi-double, deep flesh pink with yellow stamens. 12-18 in., 18-24 in. and 2-3 ft.

Prices on Group No. 1 Camellias:

CAMELLIA JAPONICA

Group No. 2

AMERICANA—Double, flesh color, striped with deeper shade. 12-18 in. and 18-24 in. only.

BEAUTE DE NANTES—Loose peony form, medium size, clear pink, golden stamens among twisted petals, 2-3 ft. only.

CARPENTRI—Double, peony form, pink. 18-24 in. only.

DIXIE—Double, rose-pink, medium large flowers. 8-12 in. and 12-18 in. only.

ELIZABETH—Double, often pure white flowers, sometimes striped with pink, and sometimes solid pink, medium size. 12-18 in., 18-24 in., 2-3 ft., 3-4 ft. and 4-5 ft.

JARVIS RED—Semi-double bright red flowers with golden stamens among the petals or in center of flowers, 3-4 ft. and 4-5 ft.

LADY CAMPBELL—Full double, medium size, deep pink flowers. 12-18 in. and 4-5 ft.

LA REINE—White, striped with carmine. 8-12 in. only.

LILI—White, sometimes spotted with pale pink. 8-12 in., 12-18 in., 18-24 in., 2-3 ft. and 3-4 ft.

MARIE LOUISE—Double, variegated white and rose. 12-18 in. and 18-24 in.

MME. DE STREKALOFF—A variable, peony-flowered blush-pink with darker blotches and streaks. 8-12 in., 12-18 in., 18-24 in. and 2-3 ft.

MEIG'S VARIEGATED—Variegated, white striped with light rose. 8-12 in., 2-3 ft. and 3-4 ft.

MRS. ABBY WILDER—Double, white flower with occasional stripes and splotches of pink. 8-12 in. and 2-3 ft.

NAPOLEON D'ITALIE—Double pink flowers striped with dark red. 3-4 ft.

NOBILISSIMA—Semi-double white, petals interspersed with yellow stamens. 8-12 in. and 12-18 in. only.

PRINCE EUGENE NAPOLEON—Scarlet double flowers of medium size. 18-24 in. and 2-3 ft.

REV. JOHN BENNETT—Semi-double, orange-red flowers, center petals interspersed with golden stamens. 18-24 in., 2-3 ft. and 4-5 ft.

ROSE EMRY—Full double with medium sized flowers of deep rose. 18-24 in. and 3-4 ft. only.

ROSITA PINK—Deep rose-pink flowers of medium size, sometimes variegated, white on pink, 2-3 ft. only.

SARAH FROST—Very double, deep pink. Free flowering. 8-12 in., 12-18 in. and 3-4 ft.

THERESA MOSSINE—Double, light pink, medium-sized flowers. 8-12 in., 12-18 in. and 2-3 ft.

T. K. VARIEGATED—Semi-double, variegated, striped with pink and rose. 18-24 in. and 2-3 ft. only.

out for this season

SHRUBS AND HEDGE PLANTS

WIRE BALLING

Wire Balling is an improved balling method we have found highly successful in digging the larger sizes of some items such as Magnolia, Holly, Oak, Standard Crape Myrtle, etc. The system makes it easy to get larger root balls, more securely held together than is possible with regular B&B handling. This extra margin of safety is often desirable, and the Wire Balling may be specified at the discretion of the customer to other trees and other sizes than those mentioned herein.

ABELIA GRANDIFLORA—Natural Growth

FLOWERING PEACH (Helen Borchers)—This beautiful double flowered variety should be the outstanding ornamental for the South this year and for many years to come. The flowers will average well over two inches across and the shade is a clear pink; petals are ruffled and incurved. We have found that when cut for use in the home the blooms hold up unusually well and do not shatter easily.

The tree is a vigorous grower, particularly when planted on medium to heavy lands. When these are not available, a mulch of straw or leaves will help achieve the same purpose.

SHRUBS AND HEDGE PLANTS—Continued

FLOWERING QUINCE (*Cydonia japonica*)—Until very recently, these *Chaenomeles* have been rather neglected by the gardeners of Florida, perhaps because they were considered more of a Northern subject and not so suitable for Southern conditions. They have been grown at Glen Saint Mary for two years now with good success; and we do not hesitate to recommend both the red and the pink flowering varieties for vivid and profuse Spring color. Half deciduous in this section, they seldom attain more than five feet in height, with about the same spread. Spiny branches, leaves broad ovate to two inches long, coarsely toothed. Flowers average one inch in diameter and are orange scarlet or salmon pink—two distinct types, so far unnamed here. Both mature yellow fruit.

PHOTINIA, Glabra and Serrulata—*Glabra* is a very handsome hardy evergreen shrub which will grow to a height of 10 feet. The new foliage is wine-colored and most attractive. *Serrulata* grows to a much greater height than *glabra* and is a beautiful sight in summer with its glossy, dark green serrated leaves and large clusters of white flowers. In winter it is covered with scarlet fruit.

----------------	-----	------

PLUMBAGO *coccinea*—The flowers of this strikingly beautiful plant are scarlet and are borne in upright spikes. The rich green leaves are 3 to 4 inches long and the plant is evergreen in South and Central Florida. It can be grown either as a bush, or allowed to spread vine-like on the ground. Otherwise, its general characteristics are similar to the well known blue Plumbago.

4 to 5 ft.	3.50	30.00
5 to 6 ft.	4.50	40.00

HOLLY (Ilex Opaca).—These Hollies are grafted from the finest selected strains of fruiting trees and should not be compared with seedlings. Choose any one of the seven types offered below; or, better still, order the whole collection, and you will never again be satisfied with ordinary hollies.

Bailey.—An old-fashioned Christmas type holly; with large, spiny leaves and producing fair quantities of attractive red berries.

East Palatka.—Foliage light green of medium size, almost smooth, and resembling Dahoon holly in appearance. A regular bearer of immense quantities of bright red berries.

Howard.—The most popular variety we grow. Foliage very dark and glossy, with some spines; berries red and attractive, excellent.

Hume No. 1.—A vigorous grower, spreading in habit, with large, almost spineless leaves. Bears regularly and the fruit is red and of large size.

Hume No. 2.—Leaves large and spiny, fruits red, large, and produced in fair quantities.

Lake City.—A vigorous grower, with large, dark, spiny leaves and attractive Orange-Red berries. Prolific. Should be included in every holly collection.

Taber No. 3.—A very distinct and outstanding variety, foliage dark green, large and spiny; fruits large, bright red and showy; maintains a perfect pyramidal form without pruning.

CHINESE RED BUD (Cercis chinensis)—We believe that this newly introduced Asiatic Red Bud, with its purplish-pink flowers, will find immediate favor with the planting public. Individual blooms, often measuring three-quarters of an inch in length, are borne in heavy clusters along the branches. Ultimate height is said to be around 50 ft. and the rate of growth is somewhat faster than that of *canadensis*. The foliage and general appearance of the tree is very similar to that popular and well-known type. A group of the three varieties makes a lovely spot of color.

Write Winter Haven Office for quotations on Citrus for Central and South Florida.

The Satsuma Orange, in the opinion of many, is the most profitable fruit that can be grown north of the round orange territory. From Savannah, Ga., along the Atlantic Seaboard South, North Florida, extreme southern portions of Louisiana and Mississippi, it is a profitable money crop. Our trees on Citrus Trifoliata, pure Owara strain, grown with the greatest of care will make profitable groves. Also, for home use it is a welcome addition to the usual home orchard.

DECIDUOUS FRUIT AND NUT TREES—Continued

BABCOCK PEACH — This new peach of Dr. Babcock's was introduced by the Southern California U. S. D. A., and is fine for Southern conditions. It is an exceedingly attractive red peach with white flesh, remaining very hard until thoroughly ripe. Fruit of the Babcock will average small to medium, but we have reports of large fruit having been produced under certain conditions. The flavor is mild and non-acid. The trees will bear the first year in the orchard or home grounds, but should not be permitted to mature fruit at the expense of growth. We are told by the men closely associated with the Babcock since its introduction that grove trees under observation have never missed a crop, which in Peach circles, is remarkable. In addition, the trees seem to suffer hardly at all from the common fault in warm latitudes, of delayed foliation. Another valuable characteristic of Babcock, is its astonishing ability to cling to the trees through severe wind storms, even when quite ripe. Commercially, this can mean money to the grower, and to the home experimenter is, at least, a great satisfaction.

CULTURAL NOTE: Because of its prolific habit, this variety should be heavily pruned and thinned for best results.

Prices on Peach Root:

Large suckers.	.75	6.50

TO SECURE MAXIMUM RESULTS FROM TREES AND SHRUBS, THE PLANTER SHOULD:

(1) See that the ground is well prepared,—spaded or loosened up and put in the same condition as if it were to be planted to a vegetable garden.

(2) Keep the ground cultivated clean around newly set plants. If a single plant is set, there should be a circle around it from 18 to 30 inches across, depending upon the size of the plant.

(3) Fertilize by giving each plant one-half pound of raw ground bone or a shovelful of well rotted cow manure. They are two of the best fertilizing materials known for practically all ornamental shrubs, except Azaleas. The raw ground bone should be thoroughly mixed with the soils used in filling up the holes about the plants. The cow manure may be used the same way, or it may be scattered on top of the ground around the plant as a surface dressing.

ARBORVITAE
RETINOSPORAS
PODOCARPUS
LIGUSTRUMS
OLEANDERS
PITTOSPORUMS
PALMS

(4) and other plants which carry a ball of earth about the roots should be set at a depth where the top of the ball is flush with the level of the ground. If the plants are in pots, do not attempt to pull the plants out, but hold the plant upside down and lift the pot off. If the ball of earth has burlap around it, do not remove it.

Set the plant in the hole with the burlap on and then cut the twine and loosen the burlap at the top; fill in the earth loosely, pour in a bucket of water, allow it to sink away, then finish filling up the hole with dry earth and pack firmly with the feet.

AZALEAS (5) require treatment somewhat different from most other plants. They like an acid soil. If the ground is not naturally acid, it is best to use muck or fresh woods earth for filling up the holes. Azaleas should be planted the same way as recommended in (4), instead of fertilizing with raw ground bone or cow manure, use cotton seed meal or castor pomace. Both of these materials help to retain acidity. After the plants are set and the ground leveled off, a layer several inches thick of dry leaves or straw will shade the roots and be beneficial.

ROSE BUSHES.
CRAPÉ MYRTLES.
SATSUMAS, PEARS,
PECANS, PLUMS

(6) and other plants handled bare-rooted should be planted at the same depth as they stood in the nurseries. This can be determined by the earth marks or difference in the color of the bark. The holes should be dug a little larger than necessary to accommodate the plants; the roots should be carefully spread out in their natural positions and the soil packed in between and under the roots by hand. When the holes are three-quarters filled, pour in a bucket of water and finish up as recommended in (4). Use raw ground bone and cow manure liberally on roses, but use only bone meal or commercial fertilizer on fruit trees, at the rate of one-fourth pound per tree.

No pruning of any kind is required at planting time. Our trees and plants are pruned properly at the nurseries by experts.
